		James M	I. Hewitt	3679					
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply									
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).									
Status

Art Unit: 3679

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carter, Sr. (US 4,537,426).

With respect to claim 1, Carter, Sr. discloses a connection system comprising: first and second pipes (12, 14) for flowing a fluid; one (14) of said first and second pipes having a female fitting (18") in fluid communication with the one pipe, said fitting having tapered female threads; the other (12) of said first and second pipes having a male fitting (16) in fluid communication with said other pipe, said male fitting having an

Page 3

external thread and a cylindrical section spaced axially from said external thread; said male fitting being receivable in the female fitting with the male and female threads engageable with one another to connect the fittings to one another; a cylindrical gasket (20") between said male and female fittings and spaced axially from the male and female threads upon connecting the fittings to one another; the male cylindrical section and the female fitting engaging said gasket when the fittings are connected to one another to seal the fittings to one another thereby to establish fluid communication therebetween. Carter, Sr. fails to teach that the threads on the male and female fittings are straight and non-tapered. Carter's male and female fittings have mating tapered threads. Given that it is well known in the art to employ many different thread types, it would have been an obvious matter of design choice to modify Carter's fittings to include a given thread type, including straight and non-tapered threads, based on the suitability and/or user preference for a particular application.

With respect to claim 2, wherein said fittings, when connected to one another by said threads, are rotatable (when loosening the threads for example) relative to one another while maintaining the gasket in sealing relation between the male and female fitting.

With respect to claim 3, wherein said fittings are formed of a cast metal material. Carter Sr.'s fittings are non-ferrous fittings. The term "non-ferrous" is considered inclusive of plastics and metal material that does not include iron, for example aluminum.

With respect to claim 4, wherein said female fitting has an opening adjacent one end for receiving the male fitting, the gasket being located on the female fitting on a side of the female threads remote from the opening.

With respect to claim 5, wherein said male fitting has an opening on one end for communicating the fluid between the first and second pipes, the male thread being located on the male fitting an axial distance from the male fitting opening at least equal to an axial distance between the gasket and a first of the female threads adjacent the female fitting opening thereby enabling the cylindrical section of the male fitting to seal within said gasket of the female fitting upon initial threading engagement of the male and female threads with one another.

With respect to claim 6, including a stop (shoulder formed by endmost thread groove or endmost thread as shown in Figure 1) carried by said male fitting precluding full threading of the male fitting into the female fitting. Alternatively, as the Examiner takes official notice of such a stop, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Carter, Sr. with such a thread stop in order to preclude complete threading of Carter's male fitting into his female fitting.

With respect to claim 7, said one pipe (14), given the broadest reasonable interpretation, could constitute or be applicable to a "main" fluid flow line, and said other pipe (12) could constitute a "lateral" line. Note also Figures 4-6. Carter, Sr. fails to disclose that said lateral line includes an elbow terminating in said male fitting. As elbows are common and widely used in the art, it would have been an obvious matter of

design choice for the skilled artisan to employ an elbow as the, or part of the, lateral line, based on the suitability and/or user preference for a particular application.

With respect to claims 8-10, refer above to the rejections of claims 3-5 respectively.

With respect to claim 12, as applicant did not properly challenge the Examiner's taking official notice of the use of the claimed saddle, such is considered admitted prior art, and it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a saddle about said one pipe in order to provide increased support and stability.

Response to Arguments

Applicant's arguments filed 5/12/05 have been fully considered but they are not persuasive.

Applicant argues the validity of the Examiner's conclusion that it would have been an obvious matter of design choice to modify Carter Sr.'s fittings to include a given thread type, such as straight and non-tapered threads, based on the suitability and/or user preference for a particular application. Applicant buttresses his argument by stating that he has provided straight non-tapered complementary male and female threads for specific purposes. While this is acknowledged, it must be understood that the reasons (advantages/disadvantages) associated with employing one thread type as opposed to another, or in place of another, are well-established and well-known in the pipe fitting art, and based on the suitability for a particular application, it is common to

Art Unit: 3679

use one thread type in favor of another. This is evidenced in myriad patents, e.g. Yoshida et al (US 4,600,219), Spears (US 5,582,439), Albrecht (US 5,848,813) and Guertin, Jr. (US 6,578,876).

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, and as explained in the preceding paragraph, the motivation to modify Carter Sr.'s fittings to include a given thread type, such as straight and non-tapered threads, is based upon knowledge generally available to one of ordinary skill in the art.

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See In re McLaughlin, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yoshida et al (US 4,600,219), Spears (US 5,582,439), Albrecht (US 5,848,813) and Guertin, Jr. (US 6,578,876) disclose threaded pipe fittings, wherein either straight or tapered threads may be employed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James M. Hewitt whose telephone number is 571-272-7084.

Application/Control Number: 10/690,718 Page 8
